

Array methods

Creating & Converting Arrays

1. `Array.from()`

Creates array from iterable or length.

```
Array.from("hello");  
// ["h","e","l","l","o"]
```

2. `Array.of(1,2,3);`

```
// [1,2,3]
```

Creates array from arguments.

3. `push()` → add at end

```
arr.push(10);
```

4. `pop()` → remove last

```
arr.pop();
```

5. `unshift()` → add at start

```
arr.unshift(1);
```

6. `shift()` → remove first

```
arr.shift();
```

7. `splice()` → insert / remove / replace (Most Powerful ⚡)

```
arr.splice(start, deleteCount, newItems);
```

```
let a = [1,2,3,4];
```

```
a.splice(1,2,"X");
```

```
// [1,"X",4]
```

8. `fill()` Fill array with value.

```
[1,2,3].fill(0);
```

```
// [0,0,0]
```

9. `slice()`

Returns portion (VERY COMMON).

`arr.slice(1,3);` // give array from index 1 to 2 do not include index3

10. `concat()`

Merge arrays.

`a.concat(b);` // merge two arrays add b to a

11. `includes()`

Check existence.

`arr.includes(5);`

12. `indexOf()` / `lastIndexOf()`

`arr.indexOf(10);` // give first position index

`arr.lastIndexOf(10);` // gives last position index

13. `forEach()` → just loops (no return)

`arr.forEach(x => console.log(x));` // iterate through each element

14. `sort()`

⚠ Converts to string unless comparator given.

`arr.sort((a,b)=>a-b);` //

15. `reverse()`

Reverses array.

`arr.reverse();`

16. `join()`

`arr.join("-");` // Join array to make a string with “-”

17. `toString()`

`arr.toString();` // array to string

18. `flat()`

`[1,[2,[3]]].flat(2);`

// [1,2,3]
